

PACKING FRAME STRUCTURE

ABSTRACT OF THE DISCLOSURE

- 5** A packing frame structure is constructed to include two top rails and two bottom rails adapted for fastening to material elements at four sides to hold material elements a row and to protect packed material elements against shocks and impact, and two blocks adapted for fastening to the bottom rails at the bottom side to support the
- 10** packing frame structure and the packed material elements above a flat surface for enabling the package to be conveniently carried by a forklift. The top rails each have a top wall and through holes in the top wall for the hooking of the hook of a truck crane or the like.
